

Movie Theatre Database ERD

ERD Explained :

Tables :

In this movie theatre ERD, I have five tables : customers, ticket, movie, consession and items.

Relations Explained :

1. customers to ticket is a one to many relations assuming one customer can buy one or more tickets.
2. ticket to movie is a one to one relationship as one ticket can be used to watch one movie.
3. customers to consession is zero or many relationship as there can be customers who do not buy anything or buy one or more things.
4. since, concessions can have many items to deal with, I created a items table. consession and items table have one to many relation as each order at consession can have one or more items.
